What is in this book

- | | |
|---|--|
| 1 Your carrier — the full picture | 6 Your LoadBoot phone line (the dialer) |
| 2 What is missing on the account — close these first | 7 WhatsApp — how it works and when you may write |
| 3 The opening call — script and checklist | 8 Your LoadBoot e-mail |
| 4 Daily availability — the feature that drives your day | 9 Booking a load — the approval path |
| 5 Your workspace — tab by tab | 10 Rules, monitoring and what ends a trial |

How to use this book

Read sections 1–3 before your first call on Monday. Keep sections 4–9 open beside the workspace during the first week. Section 10 is the part you sign up to by using the line.

1. Your carrier — the full picture

GABE LOGISTICS LLC is a one-truck dry-van carrier based in Dover, Delaware, verified and approved on LoadBoot. Their operating authority dates from December 2018, so they are well past the 90/180-day new-authority wall that blocks many brokers — you can quote them to anyone. They have been on LoadBoot without a dispatcher until today; you are the first person working this account, so the carrier's experience of LoadBoot is you.

ITEM	ON FILE	WHAT IT MEANS FOR YOU
Equipment	Dry Van · Unit 1 · 2016 Mack tractor · payload 33,001 lb	Full truckloads only. No reefer, no flatbed, no hazmat, no team.
Trailer length	not on file	Brokers ask this first. Get it on the opening call (53 ft or 48 ft).
Home base · home time	Dover, DE · home weekly	Plan the week so the truck is back near Dover by the weekend unless the driver says otherwise.
Preferred lanes	North East · Central	Start there. Anything else needs the driver's yes before you quote.
Rate floor	\$3.00 per loaded mile	The rate check uses this number. Below it, LoadBoot needs your written reason before approving.
Max deadhead	200 miles	Beyond that, ask before you offer.
Weekends	OK	Weekend pickups and deliveries are allowed.
Load boards	Carrier has DAT (active)	You still use your own board access — never the carrier's login.
Availability posted	Empty in Texas, from Sat 26 Sep evening — driver named	The truck is far from home. Your first job is a load pointing north-east.

Contacts you will use

The carrier's owner and the driver reach you on your LoadBoot line and in the LoadBoot WhatsApp thread assigned to you. Their numbers and MC/DOT are in your workspace under **Trucks** and in the carrier brief e-mail you received when this assignment was made. Do not copy them anywhere else.

2. What is missing — close these first

These gaps are what stop a broker from booking you. Get every one of them on the opening call and enter them in the workspace the same day.

GAP	WHY IT MATTERS	WHERE TO ENTER IT
Trailer length (48 / 53 ft), swing or roll-up door	First question on every call; drives which loads fit	Trucks → Unit 1 → Edit
Target rate (what they actually want per mile, above the \$3.00 floor)	Tells you when to hold and when to take it	Trucks → Carrier preferences
Operating radius and how far they will run before coming home	Turns "North East · Central" into a real map	Trucks → Carrier preferences
Minimum notice for a pickup (hours)	Stops you booking something the driver cannot make	Trucks → Carrier preferences
Straps, load bars, pallet jack on board?	Brokers ask; "unknown" loses the load	Trucks → Unit 1 → Equipment
Facilities they refuse / prefer (e.g. no Walmart DCs, no live unloads over 2 h)	Saves a cancelled load on day 3	Trucks → Carrier preferences → Facility notes
Factoring company, if any, and who receives the RC	Decides the paperwork path on every booking	Packet tab (read) → tell LoadBoot if it changes

3. The opening call — script and checklist

GABE never posted availability before this week and has never had a LoadBoot dispatcher, so you call first — do not open with a WhatsApp message. Call from the dialer on Monday between 08:00 and 09:00 ET. Have the Trucks tab open. Introduce yourself as LoadBoot Dispatch — never as an independent dispatcher, never with a personal number.

"Good morning, this is Gursewak with LoadBoot Dispatch. LoadBoot has appointed me your dedicated dispatcher effective today — I will be the one finding and booking your loads from here on. I have about ten minutes of questions so I can start posting your truck this morning. Is now a good time?"

1. **Confirm the account is live.** "Your LoadBoot account shows approved on our side — you are not waiting on any document from us, correct?"
2. **Confirm the truck.** Dry van, 2016 Mack, one unit, payload 33,001 lb. Then the gaps in section 2: trailer length, door type, straps and bars.
3. **Where is the truck right now?** The availability says empty in Texas since Saturday evening. Ask the exact city, when the driver is ready to load, and hours of service left.
4. **Where do they want to go?** Confirm North East and Central, ask what they will not run (states, cities, facility types), and when the driver needs to be home.
5. **Money.** Confirm the \$3.00 floor and ask what rate makes them happy. Confirm who receives rate confirmations and whether they factor. Say clearly: LoadBoot pays you — the carrier pays nothing for your work.
6. **Daily availability.** Explain section 4: every morning the carrier (or driver) posts where the truck is empty and when. Show them it is one line in their portal. Agree a time — 07:00 ET is the standard.
7. **How you will work together.** All offers and updates come through the LoadBoot WhatsApp thread and your LoadBoot line; documents through your LoadBoot e-mail. Ask them to save your number as "LoadBoot Dispatch — Gursewak".
8. **Tell them calls are recorded and monitored.** Say it plainly, once: "For quality and for your protection, LoadBoot records and monitors all calls on this line." It is also in the carrier's agreement.
9. **Close with a promise you can keep.** "I will have the first offers to you by this afternoon, and I will post your truck every day whether or not you hear from me."

After the call — same day

Enter every answer in Trucks and Carrier preferences. Set today's availability if the carrier has not. Log the call outcome in the dialer (Outcome + Tag + Note). Post the truck and send the first two or three genuine offers before 15:00 ET. First booking target: by day 4 (Thursday 1 Oct).

4. Daily availability — the feature that drives your day

LoadBoot carriers post a one-line **daily availability** from their portal: the truck's status (empty / loaded / off), where it will be empty (city, state), when, whether the driver must be home by a date, and hours of service left. Brokers ask "where is the truck and when is it empty?" before anything else — this line is your answer, and the workspace uses it to rank loads for you.

What the carrier does

Carrier portal → Dashboard → *Daily availability* → status, city/state, empty-at time, home-by date, driver name → Save.
One minute, every morning. If they skip a day the workspace shows "Daily availability line is due".

What you do

Workspace → **Trucks** shows the line as soon as it is saved. If it is missing by 08:00 ET, call and set it yourself from what the driver tells you (*Availability not set — set it before you call anyone*). Then **Board** ranks loads by that empty location and time.

During the trial, treat the availability line as the carrier's instruction to you: find loads from that spot, for that time, in their lanes, at or above the floor. When a load is delivered the workspace marks the truck EMPTY at the delivery city — that is your next starting point, and the moment to line up the reload.

5. Your workspace — tab by tab

Sign in at loadboot.com/app/agent with the account you applied with. The dispatcher workspace opens on Today. On a phone, the bottom bar carries Today · Board · Bookings · Messages · More.

TAB	WHAT IT IS FOR	USE IT WHEN
Today	Your queue: what is hot, what is due, availability reminders, callbacks, RCs waiting	First thing every morning, and after every call
Board	Loads ranked against the carrier's availability, lanes and floor; broker contact and rate check on each	08:00–11:00 ET booking block; again 15:00–18:00 for reloads
Trucks	The carrier's truck, equipment, preferences and today's availability line	After the opening call; whenever the driver tells you something new
Bookings	Every booking request: Quoted → Booked → RC attached → Awaiting approval → Approved → Dispatched → Delivered	The moment a broker says yes; then to attach the RC and track status
Brokers	Your broker book — who you called, what they said, whether they work with this carrier	After every broker call; before you call the same broker again
Money	Your commission per delivered load and the trial window	Weekly; it updates itself
Messages	The assignment thread with the carrier and LoadBoot staff	Anything the carrier needs to see in writing that is not a WhatsApp chat
Email	Your gursewak@loadboot.com inbox, inside the workspace	Rate confirmations, broker packets, PODs — anything with an attachment
Packet	The carrier's documents: authority, insurance, W-9, factoring notice	When a broker asks for the carrier packet — send only what LoadBoot has released
My KPIs	Calls, connects, bookings, delivered loads, response times	End of each day — this is what the trial is judged on

Daily rhythm (ET)

07:00–08:00 check-in and availability · 08:00–11:00 booking calls · 11:00–13:00 confirmations and RCs · 13:00–15:00 exceptions and check calls · 15:00–18:00 reloads for tomorrow · on call after hours for a truck that is loaded.

6. Your LoadBoot phone line — the dialer

Your line is **+1 (469) 457-9556**. It is a LoadBoot number: every call you make or receive on it is recorded, logged and visible to LoadBoot in real time. Use it for every broker, carrier and driver call. Never call any of them from a personal phone.

First time

1. Open the workspace on Chrome (desktop or Android) — the phone dock sits at the bottom right.
2. The first time it opens you must read and accept the **LoadBoot Phone Terms**. The line does not connect until you do.
3. Allow the microphone when the browser asks. Use a headset; test with a call to your own mobile.
4. In dock **Settings** you may add a US mobile number as forward-to-mobile: if the portal is closed or you do not answer in the browser, the call rings that phone next. Leave it empty if you do not have a US number — the call then goes to LoadBoot's Riley line and voicemail.

Making and taking calls

CONTROL	WHAT IT DOES
Keypad / Call	Dial any US number. From the Board or Brokers tab, tap the number and the dock dials it for you.
Incoming call	The dock rings and shows who it is if the number is known. Answer in the browser. Missed calls land in Callbacks.
Mute · Hold · Speaker	Standard. Speaker works on desktop and Android Chrome (not on iPhone Safari).
Outcome · Tag · Notes	After every call, before the next one: outcome (booked, quoted, no capacity...), who it was (broker, carrier, driver, shipper) and one line of notes. Untagged calls show as a gap on your KPIs.
Calls	Your call history with recordings. Play to review a rate you were quoted.
Callbacks	Every missed call and every "call me back at 2" you set. Clear each one by calling back.
Voicemail	Voicemails left on your line, with playback.
Texts	SMS and WhatsApp in one place — see section 7. SMS to US numbers is switched on by LoadBoot once the carrier campaign is approved; until then use WhatsApp and calls.

Before you call a broker

Have the truck's exact empty city and time, trailer length, and the floor in front of you. Say "LoadBoot Dispatch for GABE Logistics". Quote nothing under the floor. Get the rate, pickup and delivery windows, commodity, weight and the broker's MC — then put the request in Bookings.

7. WhatsApp — how it works and when you may write

LoadBoot uses **one company WhatsApp number, +1 (815) 365-1168** — the same number on the website and in every e-mail signature. It is not a normal WhatsApp app; it runs inside the workspace (dock → **Texts** → WhatsApp) and inside LoadBoot's Command Center at the same time. The conversation with GABE has already been opened by LoadBoot and assigned to you; the carrier received the dispatcher-assigned message today.

WHO	WHAT YOU SEE
GABE's owner and their driver(s)	Their messages to the LoadBoot number come straight to you. You can also start a conversation with them.
Brokers, shippers, unknown numbers	You do not see them and cannot open them — they belong to LoadBoot staff. Brokers are called, not WhatsApped.
LoadBoot staff	Read every thread live and can hand a conversation to another dispatcher. Nothing in the thread is private.

The 24-hour rule (this is Meta's, not ours)

- You may write freely only while the carrier's **last message to us is less than 24 hours old**. The screen shows the countdown.
- Once the window closes, the only thing that can go out is an **approved template** — the picker shows the ones Meta has approved. If it is empty, call instead.
- Every message the carrier sends re-opens the window for 24 hours. Answer within minutes and the window rarely closes on you.
- Voice notes, photos and PDFs work both ways. RCs and PODs that arrive here must also be attached to the booking.

What to send, what not to send

Send

Load offers with lane, rate, pickup/delivery windows and weight · pickup and delivery confirmations · check-call requests · "RC attached, please confirm" · ETA questions to the driver.

Never send

Anything from your personal WhatsApp · a broker's contact details · LoadBoot's fee, other carriers or internal process · a load, a driver or a carrier moving off LoadBoot · a marketing-style blast.

8. Your LoadBoot e-mail

Your mailbox is **gursewak@loadboot.com**. It lives in the workspace under **Email** — there is no separate login and no password for you to manage. It sends as "Gursewak Singh — LoadBoot

Dispatch". Use it for everything that needs a document or a written record: rate confirmations, carrier packet requests, PODs, broker setup forms.

- You can read, send, reply, forward, star and mark as spam. You cannot delete mail — LoadBoot keeps the record, and staff can read every message.
- When a broker sends an RC here, attach it to the booking in **Bookings** the same hour; do not just leave it in the inbox.
- Never forward LoadBoot mail to a personal address, and never run this account from a personal e-mail.

9. Booking a load — the approval path

For GABE, LoadBoot has set two safeguards in the assignment: the **rate confirmation goes to LoadBoot staff first**, and the **driver moves only after approval**. In practice:

1. **Quote.** Broker says yes on the phone. Open Bookings → New request: broker, MC, lane, rate, windows, commodity, weight. Status: Quoted.
2. **Book.** Broker confirms. Mark Booked. Tell the carrier in the WhatsApp thread: lane, rate, windows.
3. **RC.** The broker e-mails the rate confirmation to gursewak@loadboot.com. Attach it to the booking. Check the carrier named on the RC is GABE LOGISTICS LLC and the rate matches. Status: Awaiting approval.
4. **Approval.** LoadBoot checks the RC and the rate. Under \$3.00/mi it will ask for your written reason — have it ready. Status: Approved — dispatch the driver.
5. **Dispatch.** Only now the driver moves. Send pickup details in the thread; confirm the driver has the RC and the PU number.
6. **Track.** Check calls at pickup, mid-route and delivery. Record every one as an Outcome in the dialer and a line in the thread.
7. **Deliver.** POD from the driver → attach to the booking → Delivered. The workspace marks the truck EMPTY at the delivery city; your commission accrues; line up the reload.

Standard per load

BOOK when it is in lane, at or above the floor, within notice and deadhead. NEGOTIATE when it is close — ask for the number that makes it work, once. PASS, politely, when it is under the floor, out of lane, or the broker will not confirm in writing. Never argue a broker down on the phone for more than one round.

10. Rules, monitoring and what ends a trial

All of this is in your agreement and the Phone Terms; this is the plain-language version you will be held to.

- **Everything is monitored.** Calls are recorded, WhatsApp and e-mail are read live in the Command Center, and every booking is approved by LoadBoot before a wheel turns. Tell the carrier once; then work as if the supervisor is listening, because they are.
- **LoadBoot channels only.** LoadBoot line, LoadBoot WhatsApp, LoadBoot mailbox. No personal phone, WhatsApp, e-mail or social contact with the carrier, driver or brokers. The carrier can report a contact from their portal; an upheld report means same-day suspension and a permanent block.
- **Identity.** You are LoadBoot Dispatch for GABE Logistics. Never present yourself as the carrier, never as an independent dispatcher.
- **Money.** Never quote LoadBoot's fee, never discuss other carriers, never accept anything of value from a broker. Under-floor bookings need a written reason.

- **One carrier during the trial.** After it, LoadBoot may add up to three carriers (five trucks) once you have three delivered loads and no carrier report. You never add a carrier yourself.
- **Data.** The carrier's contacts, MC/DOT and documents stay inside the workspace. No screenshots to personal devices, no copies.
- **What the trial is judged on.** Delivered loads, response time, daily posting whether or not the carrier replies, tagged calls, and what the carrier says about you. Ten working days: 28 Sep – 9 Oct.

When you are stuck

WhatsApp LoadBoot at +1 (815) 365-1168 or write in the Messages tab. A broker you cannot verify, a rate you are not sure about, a driver who has gone quiet — ask before you act. Asking is never held against you; guessing is.
